

## God, Light, Gravity and Black Holes

Ever since the beginning of humanity, humans have searched for something that will explain their existence and the manifest nature of the universe. Other than what we generally refer to as God, there is no more conclusive evidence to define these events today than there was on day one. The only possible answer, or origin is a Devine intelligence in what we call eternity. The only possible solution is to let go of self and start our quest with this divine matrix and realize that we cannot know what we cannot know. This being said let's use the one God, Aba, Yahweh, Heavenly father etc. instead of self as the premise, since there can logically only be one mover.

We are called humans because we are a hue between the manifest and what is before the manifest (eternity). We are of God, so we are for God. Since it is impossible to define God, then we can be certain that God defines us and all of creation. Therefore, when we observe the properties and behavioral patterns of the creation, Gods nature is revealed, our nature is revealed as well. We are one with the creator and a physical separation as well with free will to choose self instead of our spiritual origin. If we choose self, we have fallen and separated ourselves from God. We must transcend our physical nature and identify with our spiritual nature to unite with the holy spirit.

From a conscious perspective, the most prominent and defining part of creation is light. Like its spiritual origin, light has no mass, yet it is a foundational part of all creation. The holy bible tells us that God is light, and that God is love. Love defines the spirit of God and light is defining in the process of creation. In the beginning, God said, let there

be light. Modern science can observe the behavioral characteristics of light and love, but they cannot define the origin. The Devine Matrix (God the father of creation) in eternity is the origin.

Gravity is a force that affects all of creation, yet its origin cannot be defined by our science. There are also other aspects of creation that can be observed but the origin cannot be defined. We can't know what we cannot know but God knows.

Black holes are also a phenomenon in space that can only be defined with theory and a theory is a question, not an answer. It appears that black holes may be portals that cycle creation back to its origin. The behavioral characteristics of black holes show us that the gravitational field is so powerful that all mass and even light is cycled into the black hole. Other than theory, they have no evidence of where it ends up. This phenomenon is a powerful indicator that confirms the cyclic nature of all creation, indicating that the other end of a black hole may be eternity and the spiritual realm.
